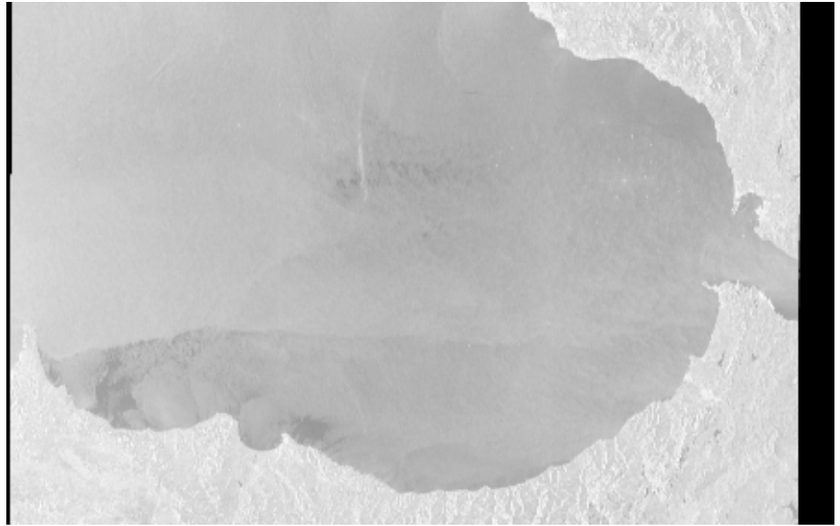
GPU-Accelerated Dual-Pol SAR Enhancement Report

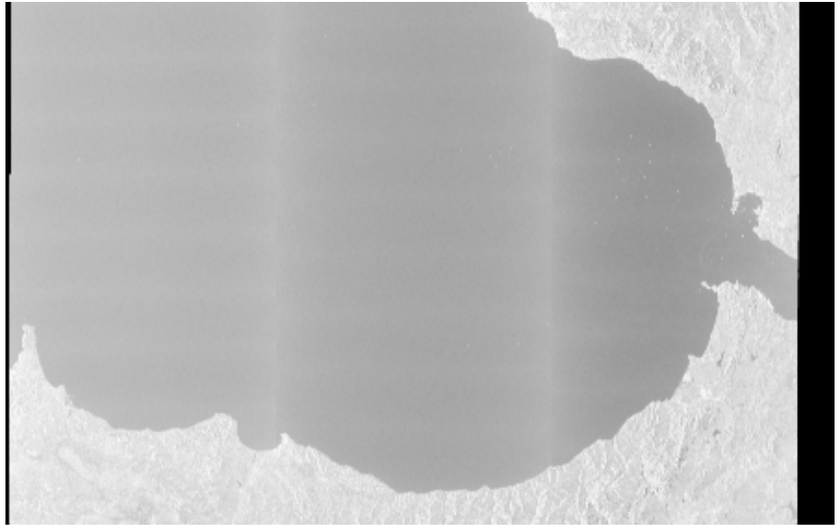
GPU total: 14.492 s | CPU total: 149.771 s

This report includes the original display-ready VV and VH images, processed dual-pol feature maps, the anomaly/background-suppression map, and the final enhanced saliency image.
Final saliency combines total intensity, dual-pol contrast, normalized difference, local contrast, a background-suppressed anomaly map, and a mild VH contribution.

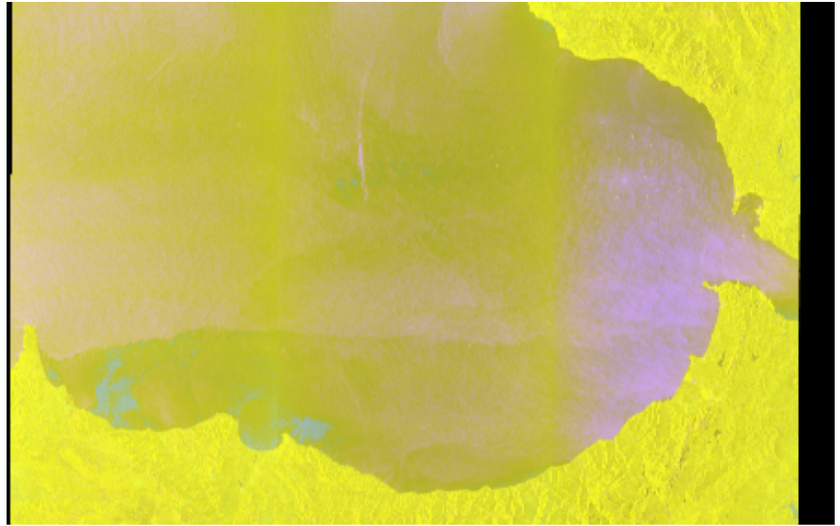
Original VV (display-scaled)



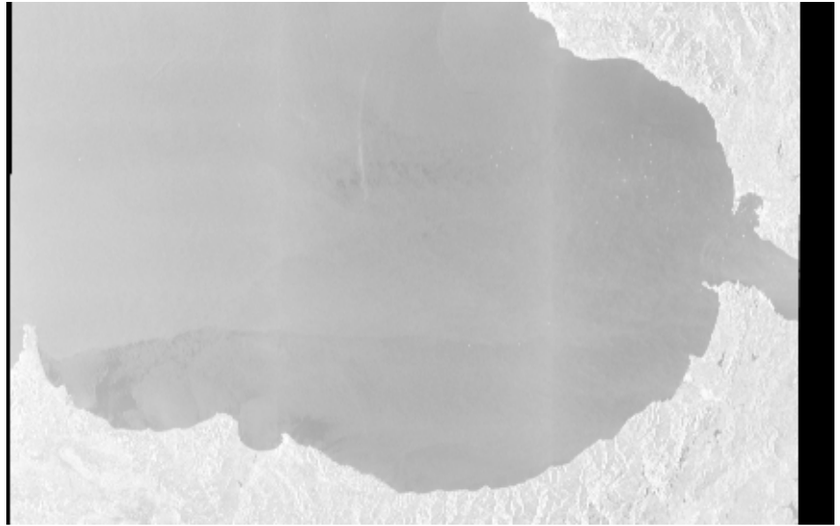
Original VH (display-scaled)



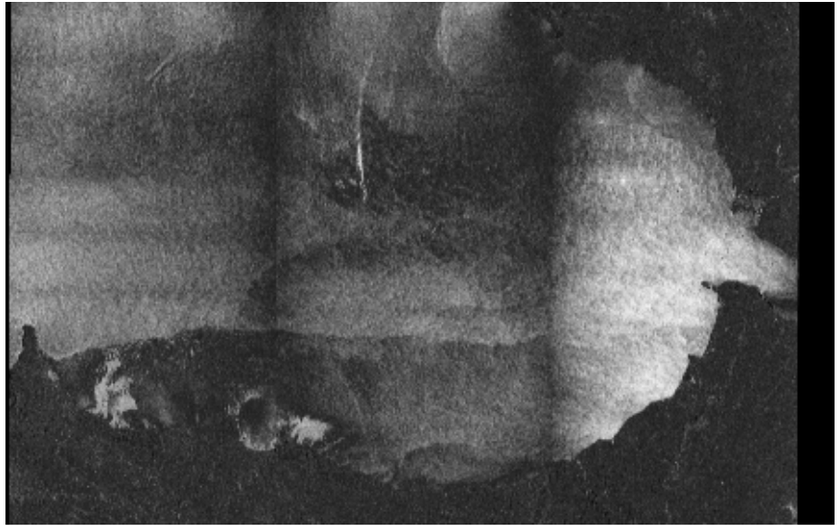
RGB composite [VV, VH, |VV-VH|]



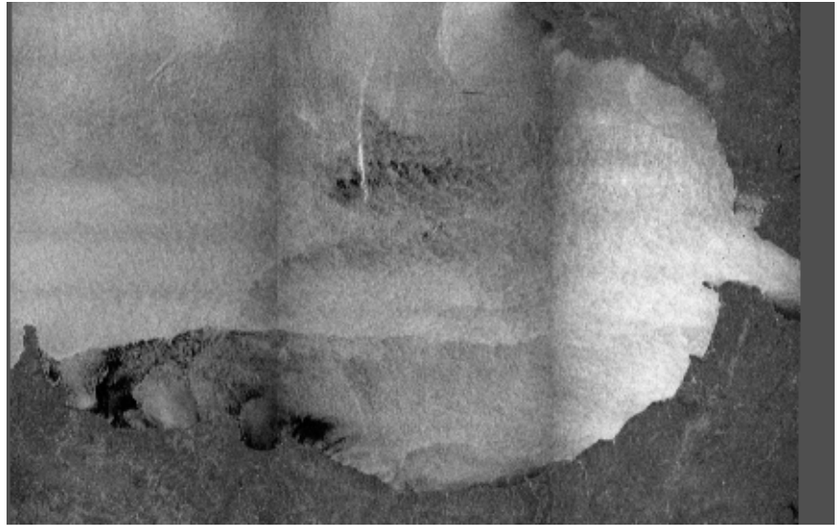
Sum map



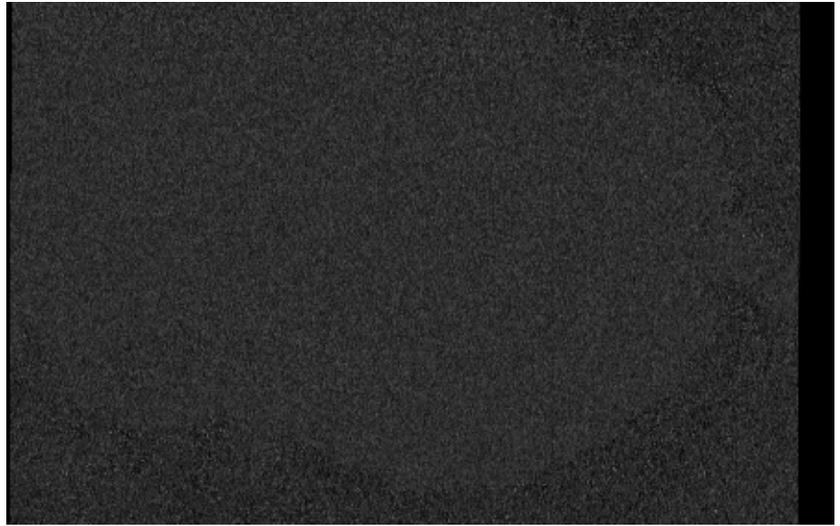
|VV-VH|



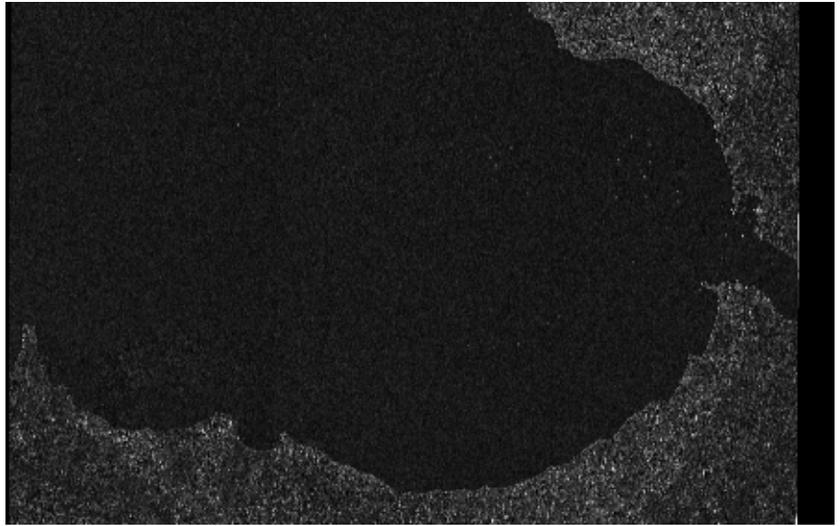
Normalized difference



Local contrast



Anomaly map



Final enhanced saliency
